

MYDOC CLINIC APP - USER MANUAL

Version: 1.0

Date: January 26, 2026

1. Getting Started

Login Process

- ◆ The application is secured with 2-Step Email Verification.
- ◆ **Access the App:** Open the application URL in your web browser.
- ◆ **Enter Email:** In the login screen, enter your registered staff email address and click "Send Verification Code".
- ◆ **Check Email:** Go to your email inbox. You will receive a 6-digit verification code from the system. (Check Spam if not found).
- ◆ **Enter Code:** Return to the app, enter the 6-digit code, and click "Verify & Login".

Note: Your session is saved on your device. You will only need to log in again if you explicitly log out or clear your browser cache.

2. Navigation Overview

The main navigation bar is located on the left side (or toggleable via the menu button on mobile).

 **Dashboard:** High-level overview of clinic stats and queues.

 **Registration:** Add new patients to the system.

 **Triage:** Capture vitals and assign patients to queues.

 **Diagnosis & Treatment:** Doctor's consultation interface.

 **Patient History:** View past medical records.

 **Laboratory:** Manage lab requests and results.

 **Lab Inventory:** Track stock levels of lab supplies.

 **Finance:** Handle billing and payments.

 **Family Planning:** Specialized module for FP services.

 **Reports:** Generate operational and financial reports.

3. Module Guide

Dashboard

Live Queue Status: Monitor waiting lists for Triage, Consultation, Lab, and Pharmacy in real-time.

Key Metrics: View daily patient counts and collection totals at a glance.

Registration

Register New Patient: Fill out the mandatory fields (marked with *) including Name, DOB, Gender, and Contact.

Search: Use the search bar to find existing patients before registering to avoid duplicates.

Triage

Queue Management: Select a patient from the "Registration Queue".

Vitals: Enter Weight, Height, BP, Temperature, and Pulse. Use the "Calculate BMI" helper.

Action: Send the patient to the "Doctor's Queue" or "Emergency" after triage.

Diagnosis & Treatment (Doctor's Station)

Consultation: View patient vitals and triage notes.

Clinical Notes: Enter complaints, history, and examination findings.

Ordering:

Lab Tests: Request specific lab tests.

Prescriptions: Prescribe medication (linked to Pharmacy inventory).

Diagnosis: Select ICD-11 codes or enter manual diagnosis.

Discharge/Refer: Finalize the visit or refer to another facility.

Patient History

Search: Lookup any patient by Name or ID.

Timeline: View a chronological list of all previous visits, including prescriptions and lab results.

Laboratory

Pending Requests: View patients waiting for tests.

Input Results: Enter values for requested parameters (e.g., Hemoglobin levels, Malaria status).

Complete: Mark tests as complete to send results back to the Doctor.

Lab Inventory

Stock Tracking: View current stock levels of reagents and supplies.

Restock: Log new purchases or adjustments.

Alerts: Items running low will be highlighted.

Finance

Pending Bills: View patients who have completed services but haven't paid.

Billing:

Review auto-generated charges from Consultation and Lab.

Add manual charges if necessary.

Payment Methods: Accept Cash, M-Pesa, or Insurance.

Receipts: Generate and print digital receipts.

Family Planning

Client Management: Specialized registration for FP clients.

Services: Track dispensed contraceptives and next appointment dates.

Reports

Daily Reports: Summary of patients seen and revenue collected today.

Custom Date Range: Generate reports for specific periods (Weekly, Monthly).

4. Troubleshooting

"Connection Error/Failed to Fetch": Check your internet connection. If persistent, contact IT support to check the backend services.

"Verification Code Not Received": Ensure you entered the correct email. Check your Spam/Junk folder. The code expires in 10 minutes.

App Freezes: Refresh the page. Changes are usually saved automatically to the backend, but unsaved form data might be lost.
